70005 - Dynamometer - 48 Components

from **21,55 EUR**

Item no.: 340208
shipping weight: 0.30 kg
Manufacturer: UGEARS

Product Description

Dynamometer - 48 Components

The basic principle of work is strength. This can be used in a variety of ways and the term power transmission gives it a high utility value as a tool. The Dynamometer, which as a technical device is equated with the term force meter, uses the basic physical principle of force determination under the action of tensile or compressive forces. Everyone is immediately aware that the present UGEARS gear train is a mechanical model.

The construct, carved out of 48 individual wooden parts, uses various drive systems to make them accessible to the viewer. The self-assembled models from UGEARS are by no means just objects to be seen, but also still lifes for decorative purposes. The responsible culture movement, steampunk, which emerged from cyberpunk, uses a semi-open design that literally watches the trade at work. Both gear drives and more exotic drive technology, such as the Maltese cross gear, a coupling gear with a coupling loop, are expressed in the attractive job reference. Rather, the total work of art works with small pictures that randomly accompany the model builder's everyday life. This is a fun everyday balance for every office desk and the first indication that work is about to end.

Warning! Not for children under 3 years.

- Number of components: 48
- Setup time: 2 hours
- Model size: 14.7 x 7.2 x 17 cm
