Product Description

Monowheel - 300 Components

The MONOWHEEL is a feat of engineering that should be familiar to some fans from the 2012 science fiction action film Battleship. Here it is extraterrestrial innovations that use sawtooth equipped single wheels ultimately as a weapon system eating through matter. This retrofuturistic wooden model from the brand supplier UGEARS(C), on the other hand, is a mechanical display piece in steampunk style.

Consisting of a total of 300 individual parts, the MONORAD mechanical still life from model making specialist UGEARS(C) advertises an extravagant appearance and great attention to detail. Here, the technical world of gears and other drive technologies is represented with faithful attention to detail. In this context, a gear-driven rolling motion can be precisely traced. The half-open design of the postmodern display piece is thus a mechanical work of art that remains unique in its kind. Mediated by a rubber band, the unicycle mechanism offers fun for the whole family and rolls and rolls and rolls. Considering this, the learning factor that develops from it is phenomenal and is very much in the style of the models in Steampunk. Here, the steam engine experiences a renaissance, which was for the development of modern industry, that all-important fact.

Warning! Not for children under 3 years.

- Number of components: 300
- Setup time: 3 hours
- Model size: 18.5 x 9.5 x 16 cm
