Revell Airbrush Tip Gun Starter Class, Airbrush for Beginners

from **22,76 EUR**

Item no.: 365573
shipping weight: 0.50 kg
Manufacturer: Revell

Product Description

Airbrushing is probably the most sophisticated technique for applying colour to a surface. Perfect colour gradients and special effects can only be achieved with the spray gun. The reason for this versatility is that when airbrushing, you do not come into contact with the painting surface at all. Even difficult and uneven surfaces can be sprayed precisely with the spray gun.

The new improved airbrush spray gun starter class is an uncomplicated and inexpensive beginner's spray gun for airbrushing. The paint container of this spray gun can be separated from the handle by an Easy Click System, which makes handling the gun much easier. In addition, the new ergonomic design makes airbrushing particularly easy.

The spray gun works on the principle of external mixing. Because this principle does not require the paint to flow through a fine mechanism, this spray gun can handle thicker paints than guns with internal mixing. And that, of course, is important in model building when it comes to flawless paint jobs.

The Revell Airbrush Spray Gun Set also includes a compressed air hose and the propellant regulator for connection to a compressed gas can. The propellant regulator connects the compressed air hose between the compressed gas can and the spray gun.

Contains the new spray gun starter class, compressed air hose and propellant regulator.

Caution! Not suitable for children under 36 months.
