Thinner for AQUA COLOR, Aqua Color Mix, 100 ml

from **5,67 EUR**

Item no.: 365639
shipping weight: 0.20 kg
Manufacturer: Revell

Product Description

Revell Aqua Color Mix is an innovative combination of thinner and drying retarder, specially developed for use with Revell Aqua Color paints. This 100 ml product offers you an excellent way to optimally prepare your paints for use in an airbrush gun and at the same time prevent the paint from drying quickly in the gun and on the model.

The advantages of Aqua Color Mix at a glance:

1. Optimum dilution: Aqua Color Mix enables an ideal mixing ratio for even colour delivery and perfect spraying results
2. Delayed drying: The drying of the paint is delayed so that the paint does not dry too quickly in the spray gun and on the substrate
3. Improved spraying results: The use of Aqua Color Mix reduces the undesired edge alignment, especially with matt and silk-matt colour shades

Application of Aqua Color Mix:

1. Mix 3-4 parts Revell Aqua Color paint with 1 part Aqua Color Mix in a suitable container
2. Be aware that the mixing ratio depends on the spray gun used and the working pressure of the compressor. Therefore, start with a lower dilution first and test the paint
3. If the spray gun spits or the paint dries too quickly on the model (rough surface), dilute the paint further until the desired result is achieved
4. Pour the diluted paint into the airbrush gun and apply it to the model in even layers

Revell Aqua Color Mix is the ideal solution for all model builders, artists and DIY enthusiasts who want to work with Revell Aqua Color paints and achieve professional spray results. The 100 ml bottle offers enough content for numerous applications and ensures optimal colour processing. Order your Aqua Color Mix now and experience the benefits of this thinner and drying retarder!
