

Item no.: 362937 **DIGITAL 124/132 Control Unit** 

Item no.: 362937 shipping weight: 0.10 kg Manufacturer: Carrera

## Product Description

With the control unit, you make all the necessary settings before the race and trim your slot car for the right race! First, the hand controller is connected to the slot car. This is the basis for the other settings. You can also set up a ghost car that drives around the track at the desired speed. You can use this function as a pace or safety car, for example, if there is a crash on the track. Of course, you can also adjust your slot car via the control unit. The speed and braking power can be adjusted in ten stages. Depending on your skills and personal preference, the car can be adjusted to your driving style. In combination with the Pit Lane, the tank capacity of your slot car can also be adjusted, making even more realistic races possible.

Attention: not suitable for children under 36 months!
