Product Description

Air Motor - 81 Components

The compressed air motor as the main drive of the steam engine stands like no other for the heralding of a new era, the mechanical world. This turning away from feudal structures, also known as the industrial revolution, uses the energy of the high pressure gases to generate work, performance and strength.

The new and unique wooden kit Air motor by the brand manufacturer UGEARS brings these early days of modern technology to life in a very impressive way and makes the assembled models appear more like small works of art. The present collector's item, which has to be assembled from a total of 81 individual components, accordingly serves the art direction of retrofuturism and steampunk, which have developed from the dystopian science fiction literature of cyberpunk. With the air motor kit, UGEARS proves once again that a mechanical compressed air system can also be artistically reproduced. As a suitable utensil for every metalworking office, every balloon that is inflated with this miniature machine can become the highlight of the company party. The functionally fully functioning steam engine is thus power and appearance in one, a small mechanical work of art.

Warning! Not for children under 3 years.

- Number of components: 81
- Setup time: 2 hours
- Model size: 16.2 x 7.8 x 10 cm
