Product Description

Tram Line - 284 Components, from the Series "Mechanical City"

The new product from UGEARS(R) is called the tram line and is a collector's item from the series "Mechanical City". This retrospective impresses with an excellent design that savors the beginnings of urban road transport with all its facets. This unmistakably includes the marshalling yard of the urban railroad depot. Here, the shunting of heavy local trains is reproduced in detail.

The uniqueness with which UGEARS(R) makes its mechanical models available to the target audience with an affinity for technology and model making is based on the retrofuturistic borrowings of the steampunk style. The partially open-worked wooden surfaces of the components, which are assembled without glue and other tools, bring the technology to the forefront, which is able to reproduce the gear, lever and roller mechanics in detail. The present wooden model, the streetcar line from the model series "Mechanical City", is therefore a mechanical work of art, which bears postmodern characteristics. With the streetcar, a rail overpass, as well as rails and many other components more, the magic of an inner city atmosphere is created, which is the focus of contemporary events. The present still life in its 248-part construction thus resembles a unique piece, which is capable of decorating any display case.

Warning! Not for children under 3 years.

- Number of components: 284
- Setup time: 5 hours
- Model size: 90 x 18 x 12 cm
