Product Description

Research Ship - 575 Components

The brand manufacturer UGEARS(R) offers a very special highlight to its modeling-loving target audience with the "Research Ship" model kit. The wooden construction consisting of a total of 575 wooden parts is a skillful custom work, which revives the times of great discoveries. The conquest of the North or South Polar Circle, the African continent or South American latitudes would not have been possible without technical advancements.

The ship designed by UGEARS(R) in the style of steampunk is thus a tribute to the explorers and pioneers whose spirit of exploration is reflected in this ship model. To this end, the retrofuturistic design of the hull has been equipped with some extras, which include, for example, a slewing crane and a drop ramp. The clear illustration of technical movement modes can be precisely tracked and thus has a corresponding learning character. Of course, no lifeboat, additional motorboat or bathyscaphe for discovering the deep sea should be missing on an exploration trip. Almost all models of the brand manufacturer have switching and turning devices, which operate the motion control manually. For this purpose, a rubber motor is used, which is also used in the present research vessel. The present still life is thus an enrichment for every modeling enthusiast, researcher and art-loving explorer.

Warning! Not for children under 3 years.

- Number of components: 575
- Setup time: 10 hours
- Model size: 38.5 x 11 x 25 cm
