Pit Lane

from **93,76 EUR**

Item no.: 362941
shipping weight: 0.10 kg
Manufacturer: Carrera

Product Description

Even a Carrera car has to go into the pits sometimes

Real racing feeling for the DIGITAL 124 or DIGITAL 132 track! The Pit Lane adds an important racing element to the Carrera track. The Pit Lane works in conjunction with the Control Unit (30352) or the Black Box (30344). However, the extended fuel tank function is only available when used with the Control Unit!

Pit Lane gives you three new ways to make racing on your track even more exciting and add tactical elements.

Automatic lap counting

Firstly, a lap counter is integrated into the pit lane. Especially in longer races, it is easy to lose track of the laps you have completed. Thanks to the automatic counting, you can fully concentrate on your lap times. The lap count can also be deactivated if desired.

Refuelling the vehicles

No matter in which racing series - the pit stop is always a special moment. Used tactically, it can make the difference between victory and defeat. This is also the case on your Carrera track! You can set the slot cars to make regular pit stops. If you don't go to the pits, this slows down the slot cars and the outcome can be completely changed. To be able to read the fuel level in your tank, you need the Driver Display (30353).

Use of a pace car

On the other hand, the pit lane can also be used to have a pace car lead the race. As in real races, you can bring the pace car onto the track after accidents to recover the cars that have gone off the track. You only have to make sure that the slot car has pace car electronics. If you want to use the tank function and a pace car at the same time, you need two pit lanes.

- Pit lane with different driving modes for true-to-the-original races
- DIGITAL 124, DIGITAL 132
- For even more action on the race track
- Package contents: 1x turnout input, 1x turnout output, 1x standard straight, 2x single-track straight, 1x pit stop adapter unit with 2x end pieces
