from **40,12 EUR**

Item no.: 363959
shipping weight: 0.50 kg
Manufacturer: Carrera

📄 Product Description

You don't have to make any big preparations to conquer the skies with the Quadrocopter X2. The flying object is delivered ready-to-run and gives you a lot of pleasure from the very first minute. Everything you need in terms of equipment is included. You get a rechargeable battery, a USB charging cable for fast and mobile charging, a 4-channel controller, two spare motors and a screwdriver for small manual jobs. The rotor diameter is 5.7 cm in each case, while the length of the entire drone is quantified at 17.6 cm. Up to 7 minutes of pure flying pleasure awaits you after a charging time of approx. 60 minutes. Let your drone soar into the sky and enjoy the great flight behaviour during this time.

The 2.4 GHz radio technology with digitally proportional control ensures that up to 16 flying friends can move their quadrocopters simultaneously without interference. Simply perfect! Thanks to the headless mode, the aircraft always moves in the direction in which you steer it. No matter what position it is in at that moment. Thanks to the 4-axis gyro system, your quadrocopter remains in a stable flight position, while the automatic flight altitude assistant with auto take-off and landing function ensures easy handling. More modes are waiting for you! The coolest function is indeed the 3D looping function. Spectacular stunts are guaranteed. Are you a beginner or a pro? This question doesn't matter at first, because you can easily select the Beginner or Advances mode here.
