

Item no.: 365708

Enamel colour iron, metallic, 14ml - modeling paint

from **1,81 EUR**

Item no.: 365708
shipping weight: 0.10 kg
Manufacturer: Revell

Product Description

Revell Color is a synthetic resin enamel paint that does not attack the plastic surface of plastic models. However, many other materials can also be painted from the 14 ml paint can, which is popular with many hobbyists.

All colours - except signal colour - can be mixed with each other and thinned with Revell Color Mix.

This way, the paint can be applied not only with a brush but also with a spray gun. As a cleaning agent, use Revell Painta Clean for the brushes and Revell Airbrush Clean for the spray gun.

Caution. Not suitable for children under 36 months.

This colour is used

- as a paint for titanium parts which have a much darker colour than other planking parts, especially in the engine area
- for pitot tubes
- for rims of landing gears and landing gear legs, as far as these have not received another coat of paint - e.g. silver or white glossy
