from **4,97 EUR**

Item no.: 364907
shipping weight: 0.10 kg
Manufacturer: Carrera

Product Description

Supports like these are used to properly fix loops, bridges, steep curves, jumps or a fly-over. They give the elements better support, especially when you drive through at high speed in your slot cars. The set contains six parts, including two short and two long supports and two feet to attach them to the ground. The glossy black design ensures that the supports do their work discreetly in the background in the later diorama. An essential expansion set if you want to build spectacular race tracks.

Not suitable for children under 36 months.

- Extension set support set standard
- DIGITAL 124, DIGITAL 132, EVOLUTION
- For mounting loops, bridges, steep curves, jumps and fly-overs
