70055 - Windmill - 585 Components

from **73,73 EUR**

Item no.: 340238
shipping weight: 1.50 kg
Manufacturer: UGEARS

Product Description

Windmill - 585 Components

Windmills belong to those testimonies of history that are able to reflect the technical development in its beginnings. The product of human innovation reflects the transition from pure manual labor, through animal husbandry to the use of wind and water power. Accordingly, the focus is on the drive itself, which in the form of a propeller is still used in many ways today.

The "tower windmill" designed by the brand manufacturer UGEARS(R) from sustainable wood is thus not a product of pure fantasy, but rather revives its myth through a lot of legend and postmodern magic. Stories, such as that of the world-famous "Don Quixote" from the 1605 novella of the same name by Don Miguel de Cervantes Saavedra, thus enliven technical progress and sometimes question it critically or comedically. Less about the fight against the windmill, the models of UGEARS(R) are dedicated to the technical understanding, which conjures up a retrofuturistic work of art in the style of steampunk in 585 individual parts. The aerodynamic wings as well as the six-arch base are the spitting image of the Chesterton Windmill in the eponymous village of Chesterton in Warwickshire. The power of the wind, which can be transmitted with a rubber band, can be traced here in every detail and is a valuable illustrative object of mechanical achievements.

Warning! Not for children under 3 years.

- Number of components: 585
- Setup time: 12-15 hours
- Model size: 35 x 48.5 x 22 cm
