Product Description

UGEARS Moto Compact folding scooter, 192 parts, 3D Puzzle

The Moto Compact folding scooter with spring mechanism, is a clever addition to our family of wooden two-wheeled model kits. For many young people, a scooter is their first form of motorised transport. It symbolises freedom, mobility and a fun way to get to school, to various activities or to their first job. It is the ticket out of the neighbourhood where you grew up to explore the world that lies beyond. Feel that feeling of youthful freedom as you assemble this elegant little foldable scooter.

For its size, the Moto Compact 3D Puzzle Foldable Scooter contains plenty of power. The wooden model is powered by a spring-loaded motor and can travel up to 2 m with a single wind-up. The handlebars can be turned to three different positions to send your scooter straight ahead or into a left or right turn. Special features include front and rear suspension and a sophisticated folding mechanism to ensure easy and safe transport.

To fold your Moto Compact scooter, grasp it by the front and rear sections and push them together. The handlebars are also folded in this way. You can then put the folded scooter in your bag and take it with you. You can also put it on its stand, which can be folded down on the left side of the model.

Caution. Not suitable for children under 36 months!
