shipping weight: 1.00 kg
Manufacturer: Clementoni

Product Description

Clementoni Glitter Lab, experimental kit, from 8 years (DE edition).

Discover the bright and sparkly side of science with this science set by customising and decorating creations with glitter. A complete and safe play experience for wonderfully sparkly creations that make room for creativity and individual aesthetics through simple chemical reactions.

Little girls have always loved glitter and sequins and this set allows them to customise items and discover the scientific principles behind their creation.

All experiments and substances used for the creations are developed and tested to avoid dangerous reactions. The mini cookie cutter can be used to make glitter, which can be used to customise and decorate all the creations that are the result of the experiments in the set. The set also includes a lava lamp that can be assembled for the children's room and decorated according to the current trend.

Caution! Not suitable for children under 36 months!

- Recommended age: from 8 years
- Number of players: from 1 player
