📄 Product Description

The helpful PAW Patrol dogs are real heroes who are guided through many adventures by their big-hearted trainer. Each little dog in the series has its own means of transport and therefore different tasks, talents and abilities. Together, the four-legged friends are an unbeatable team that takes on every challenge and makes the world of humans and other animals a better place. In this Carrera FIRST PAW Patrol - Race 'N' Rescue set, the lovable but somewhat scatterbrained Dalmatian Marshall competes against his friend Chase in a fire engine on the 3.5 metre long race track. Chase is a German shepherd who likes to be in charge and takes to the starting line in his police car. How does this race look? Can Marshall stand up to his mate and be the first PAW Patrol member to arrive at the scene of the action? Interactive play functions with light, sound and music add to the fun, as do the funny roundabouts that each 1:50 scale kart has to pass through once during a lap. Thanks to the attractive PAW Patrol licence, the design is based entirely on the courageous dog team. The hand controllers are specially designed for children's hands. Type C batteries are required to control the vehicles via the connection rail. Batteries are not included in the set. If you would like to find out more about your PAW Patrol heroes, then take a look at our PAW Patrol theme world!
