Product Description

Some people in a hurry hold on to the handles, use the running board as a step and jump into the rear portal of the tram. This wooden puzzle of the yellow tram has four wing doors, but the driver's cab has narrower doors. The pantograph of this model kit lifts up and the tram with the words "welcome to the minibus" on the side sets off, because yes, you really can move this model kit on its tracks. Your new model kit is a replica that was probably inspired by the old trams in Lisbon, Portugal. Trams still run there with three arched windows at the ends, graceful lines on the sides and curtains attached behind the windows. Have you spotted the funny detail of the two lovebirds in this 3D puzzle? Old tram tinkering with children This model construction kit contains 145 pieces. Almost all the puzzle pieces are made of wood, but you also get two pieces of transparent, flexible plastic for the windows of the tram. You will also receive glue, but the majority of this craft kit for adults and children is assembled using pin and hole joints. The wooden panels have been pre-cut with a laser beam to create a perfect fit for the shapes to be assembled. For added convenience, you can sand the studs a little smoother. The wood in this craft set for children and adults is already coloured yellow, so you don't have to play around with paint. Unless you want to paint your tram red. Wooden construction kit for adults For this 3D wooden puzzle, you also assemble the sleepers with the rails and the honeycomb pattern underneath. This is the hobby of putting everything together yourself. This 3D wooden puzzle will keep you busy for an hour or two and can be a nice challenge for someone who has never built a model before.
