## Ferris Wheel

from **8,66 EUR**

Item no.: 374896  
shipping weight: 0.20 kg  
Manufacturer: Rolife

### Product Description

There are few things more romantic at a funfair than a Ferris wheel. From a great height, you look down on the world below and slowly turn a little further. Their model Ferris wheel has twelve gondolas, each of which turns in the same way as in reality. To add to the romance, they all have a heart on the side. You can really turn the 3D puzzle of a Ferris wheel. At the bottom there is a bench on a lamppost where couples can wait their turn. Clear your head, make a 3D puzzle. The construction of this Ferris wheel is as simple as it is ingenious and therefore great for making with children. A spoked wheel about sixteen centimetres high stands on four legs. It's fun to make this miniature craft set together with others, because everyone can make a few spokes of the wheel. This also applies to the twelve gondolas. The repetitive character of this construction set even has a relaxing or therapeutic effect. The puzzle pieces of this DIY 3D puzzle are pre-cut for you in wooden panels. You slide the pieces out and assemble them without glue according to the logical building instructions. The wood is kept thin to achieve a beautiful result. Do not press in the centre when assembling, otherwise parts may break. Press right next to the ridge to distribute the pressure. We supply spare parts anyway. The big question now is: do you leave your wooden puzzle natural or do you paint the model kit? Great hobby gift. With its 120 puzzle pieces, this model kit is great for young and old to make with children. Children from the age of seven can make it themselves, perhaps younger people too, but only under supervision.

Details- 3D Puzzle- 120 pieces- from 7 years- 15,5 x 6,2 x 16,5 cm
