### Product Description

Set of Eurobox 600 mm x 400 mm x 185 mm filled with 2 grid foam inserts. The grid of the foam allows the foam inserts to be customised to all shapes. It is ideal as protection for the transport of various industrial goods such as medical equipment, individual tool parts or technical devices. The grid foam is perforated with a grid of 20 mm x 20 mm x height of the insert (70 mm), as well as a circumferential edge of 25 mm. We use a 10 mm thick base (DS010B), which enables even heavy products to be transported. The dimpled foam serves as a top cover and is cut to fit the lid of the Auer Eurobox perfectly. As it is equipped with a self-adhesive film, you do not need any further aids. All you have to do is remove the adhesive film from the foam insert and stick the self-adhesive side into the hinged lid of the Eurobox. The entire set can therefore be designed, customised and used according to your personal requirements without any special tools. Securely closed The Euro container with hinged lid from AUER Packaging can be closed in next to no time thanks to the easy-to-use hinge system. Your goods are therefore optimally protected against transport damage and soiling.
