Product Description

For all those who couldn't get enough of the battle of the gods, there is the matching Feldherr storage box for safe storage of the miniatures and game material of the Kickstarter exclusive "Tomb of Wonders" Stretch Goal Box. With space in the box for the contents of the "Divine Offerings" optional buy. Two full-size and six half-size foam inserts ensure that all the contents of the "Tomb of Wonders" Stretch Goal Box are stored neatly and well protected. No matter whether it's the creator Ptah himself, the giant Petsuchos or a simple Sobek warrior. Each figure has its own compartment. Surrounded by soft, fine-pored foam, your figures are optimally protected during transport. You don't need to worry about scratches and chipped paint on your painted figures or broken details on your miniatures. An insert with a separate card compartment has been included in the set for sorting the playing cards. The finger-wide recess makes it easier for you to remove the deck of cards. Large format cards are stored in the large compartment next to it. Of course, the cards also fit with protective sleeves. You can distribute the small game material, such as tokens and markers, across the free compartments as you wish. Finally, secure the top of the inserts with the foam lid provided. Surrounded by protective foam, your figures cannot fall out or bump into the lid of the box. The entire contents of the "Divine Offerings" Optional Buys, the "Tomb of Wonders" booklet, the Ptah and Sobek God Dashboards, Ptah and Sobek Merged God Dashboards, Deluxe Devotion Board and the Deluxe Central Board are stored on the foam lid. The FSLB310 storage box is made of coated, double-wall cardboard and is therefore very light yet stable. The attachable lid reliably protects the contents from dust and other external influences. The two plastic-reinforced carrying handles on the sides make the box easy to transport. This means that all miniatures are safely packed, the game material is neatly stowed away and your Kickstarter Exclusives are optimally protected.
