Product Description

Tales from the Loop: Germany in the 80s, Mystery Tape (DE Edition).

The sun was already low in the sky, enveloping the landscape in its golden glow. The surrounding mountains, the trees in the forests, everything cast long shadows across the vast landscape. The longest shadows, however, seemed to emanate from the cooling towers of the Königschron reactor plant, on whose shiny surface the light refracted. It was the best time of our lives, full of freedom and adventure. And sometimes also full of danger - but without danger it wouldn't be a real adventure.

Through this book, the stories of Tales from the Loop find a new home: right on our doorstep.

Hidden secrets, mysterious creatures, strange technology and a conspiracy of great consequence are just waiting to be discovered around the experimental reactor plant of Königschron GmbH in the Taunus Mountains!

What this book offers:

- Germany in the 80s: a complete description of Germany in the 80s that never existed. The youth of children in West and East Germany is examined as well as the political events of that explosive time at the end of the Cold War
 - The Taunus Loop: The German Loop is described in detail. From the idyllic villages, forests and mountains of the Taunus to the research facility of Königschron GmbH, with numerous characters and hangers-on for exciting adventures as well as a complete mystery landscape
 - Kaiserspiel: Four detailed scenarios that can be played on their own or combined into an overarching campaign:
 - Neue Deutsche Welle (New German Wave): Aggression is suddenly spreading everywhere and does not even stop at the children's environment - but what is the trigger for this?
 - Under the spell of the Bärchis: The new mascot of Königschron GmbH, a teddy bear, immediately enjoys great popularity ... perhaps even a little too much popularity?
 - The crack in the veil: When the children come across a mysterious object while playing, they do not yet suspect that a story of truly unknown dimensions lies ahead of them
 - When the siren is silent: Something is wrong in the reactor plant. When the shift change fails to materialise and the adults are seized by a strange worry, the children are after all the only ones who have all the necessary puzzle pieces to perhaps even save the entire Taunus
 - Caution. Not suitable for children under 3 years. Choking hazard due to small parts that may be swallowed
- Type: Mystery volume
 - Language: German
 - Number of pages: 112
