Product Description

DSA5 Sphärenklang - Die Dampfenden Jungle (DE), CD

On the fog-bathed ridges of the rain mountains, on the pearly white beaches of the forest islands and in the impenetrable rainforest in between these have existed for millennia Forest people and Utulus in various tribal cultures and watch over the dangerous mysteries of the steaming jungle.

With this audio CD you can bring the sounds of Meridiana to your gaming table. It was conceived by Ralf Kurtstiefer in cooperation with the DSA editorial team in order to audibly depict the exuberant diversity of the steaming jungle.

Wild and untouched, the rainforests of the south present themselves to daring explorers from outside. But appearances are deceptive, because the Green Hell has always been the territory of animistic tribal cultures of the forest people and Utulus, who live here according to the laws of the Eternal Forest.

They watch over ancient mysteries that lie deep in the inaccessible jungle, Slumber in the hidden gorges of the rain mountains or on the coasts of remote islands - but not even the people of the steaming jungle know all their dangerous secrets

With the music pieces on this CD, many game scenes in the deep south of Aventuria can be atmospherically accompanied. A wide variety of encounters and experiences, as are typical for the rainforests of Meridiana, served as inspiration, and many of them can also be sensibly accommodated in the accompanying regional adventure jade green and cobalt blue. The album is also suitable as a pure musical enjoyment and as a creativity-promoting attunement to the multifaceted environment of the steaming jungle.

Warning!Not suitable for children under 36 months.The set of rules is required! As well as the Steaming Jungle.
