from **26,39 EUR**

Item no.: 390456
shipping weight: 0.40 kg
Manufacturer: TAMIYA

Product Description

In October 1989, Toyota's new flagship, the Lexus LS400, made its debut. The vehicle is powered by a 3,968 cc DOHC 8-cylinder aluminium engine and thus achieves an output of 250 hp. This performance is only possible thanks to the 4-speed automatic transmission, which is the reason for the rapid acceleration. In addition to fabulous acceleration, the advanced 4-valve disc brakes offer safe driving and braking thanks to the anti-lock braking system. In addition to the technical specifications, the interior, which is characterised by fine-grain leather and California walnut, is also striking. With the help of both technical and tasteful components, Toyota has created a safe and, above all, a high-performance model car. Kit model, scale 1:24, replica engine, removable bonnet, detailed instructions. Caution! Not suitable for children under 14 years of age. Product details - 1:24 scale kit model - Length: 208mm, width: 86mm, - Faithful reproduction of the Lexus LS400 (UCF11L) - Detachable bonnet with replica engine (V8 engine) - Rubber tyres - Driver figure included - Tools and paint required for assembly (available separately).
