TGL01 - Night of the Eiffel Tower

from **32,55 EUR**

Item no.: 391844
shipping weight: 0.40 kg
Manufacturer: Rolife

Product Description

Recreate Gustave Eiffel's outstanding engineering in this 1:638 scale model of the Eiffel Tower in Paris. Standing at 330 meters tall, it held the honor of being the world's tallest building for 41 years, from its completion in 1889 to 1930 when New York City's Chrysler Building dethroned it. Over the years, the Iron Lady, as affectionately called by French people, became not just a prominent feature of the Parisian skyline, but also a symbol of French culture. To maintain its splendor and beauty, our artisans stayed true to the original design of this world-famous landmark by replicating its iconic lattice architecture as well as its 4-part structure. Even in terms of colors, this Robotme-Rolife 3D wooden puzzle stays true to the original with a rusty wrought iron look. The four lighting modes, however, give it a dreamy and romantic ambiance that's befitting of the City of Love. Fall head over heels for this dreamy architectural model starring the City of Love's famous landmark, the Eiffel Tower.
