Item no.: 365121
shipping weight: 0.50 kg
Manufacturer: Folded Space

Product Description

Insert for a game with external dimensions of 29.7 x 29.7 x 7.3 cm. Folded Space has also produced a similar insert for Rallyman: DIRT: FS-RMDIRT. Insert compatible with Rallyman: GT®, including the Championship®, Team Challenge®, World Tour®, GT4®, GT5® and Adrenaline Pack® expansions. The design allows for both efficient storage and an enhanced gaming experience. The trays can be used during the game and make it much easier to set up and put away. The trays are arranged in up to three layers. The hexagonal track tiles are arranged in two stacks of 24 tiles each. On one side, you can replace 14 of the tiles with the bridge piece as shown. This product also contains two cardboard boxes in which you can store the rest of your card tiles separately. More on this below. The insert contains trays for storing and organising all the game components. There are individual player tile trays for each of the six player colours. The card trays provide space for all card sleeves. The small filler tray is placed between the two stacks of track tiles to prevent them from moving when carrying the game or storing them vertically. There are two compartments for storing the focus markers, so one can be placed on either side of the table for easy access for all players. Each compartment holds over 100 markers. This is not enough to hold every single marker from all expansions, but is more than enough for use in your games. FS-RMGT includes two cardboard folding trays to store all card tokens that do not fit in the main game box. These can be stored on your shelf next to the game and have a printed design that matches the game box. The two folding boxes are delivered flat packed and need to be assembled. First open the box and fold back all the fold lines so that the box is square. Next you need to assemble the bottom parts of the box. Start with the long rectangular piece, followed by the side flaps, and finally tuck in the piece with a flap as shown. We recommend gluing the bottom flaps of the box together to improve stability as the card tiles are heavy. As mentioned above, all trays can be used during set-up and play. When packing the box, first place the damage token bag (with the damage tokens inside) between the two stacks of track tiles as shown. Finally, place the rulebooks on top of everything and cover the box. This fills the box completely and the game can be stored vertically. This product consists of a flat pack with 3 Evacore sheets and two card insert boxes. The inlay trays and boxes must be assembled using normal PVA glue. Detailed instructions are included in the pack.
