Product Description

P-Series - AR555 model kit: A treasure for collectors and aviation enthusiasts. For collectors and fans of aviation history, the P-Series - AR555 model kit in 1:72 scale offers a unique opportunity to create a piece of fictional history. This exclusive kit includes 98 precision-engineered parts to faithfully recreate a long-range, all-wing bomber - an aircraft design that was planned but never realised. With a length of 220 mm, a height of 52 mm and a wingspan of 292 mm, this model bomber is an impressive collector's item. Suitable for modelling enthusiasts aged 12 and over, this Level 4 kit is an appealing challenge, especially for those who enjoy gluing and painting. Scope of delivery: Unassembled plastic model kit - Illustrated, multilingual building instructions - Authentic decals. This kit is ideal for advanced modellers (Level 4) who want to further develop their attention to detail and craftsmanship. It will appeal primarily to collectors and history buffs who are passionate about specific chapters of aviation history. Special features: Highly detailed fuselage parts and six engines for a lifelike representation - Part of the P-Series, which presents unique, never-realised aviation designs - Attractive special packaging that will stand out in any collection - An essential contribution to the "Myths of Aviation History" series. Background information: The P-Series. The P-Series is a special collection in modelling that focuses on aircraft and vehicles that only existed on the drawing board. This series highlights the "what if" scenarios of aviation history and offers collectors and aviation enthusiasts an exciting insight into alternative designs. The AR555, as part of this series, epitomises a visionary design from the mid-20th century and expresses the progressive ideas and technical dreams of the era. The P-Series - AR555 model kit is therefore more than a hobby project; it is a key to a world of innovation and unrealised visions in aviation history.
