Product Description

The model kit of the famous German A4/V2 large rocket presents a faithful replica of the first rocket to break through the space barrier thanks to its liquid engine. With a scale of 1:72 and an impressive height of 215 mm, this model is a must-have for all fans of space history. Whether you've already built a few models or are just starting out - thanks to the Level 3 difficulty level, this kit is ideal for anyone aged 12 and over who loves simple gluing and painting. Scope of delivery: - Plastic model kit (not assembled) - Illustrated, multilingual building instructions - Authentic decals. With a difficulty level of Level 3, this kit is perfect for modelling fans aged 12 and over who have already gained some experience in model building. The finished model will not only be an eye-catcher in your collection, but also a great talking point for anyone interested in space travel and history. Special features: - Highly detailed surfaces that emphasise the technical sophistication of the rocket. - Includes launch platform for a complete experience. - Authentic decals provide the final, faithful appearance. Background information: The A4/V2 rocket has a firm place in the history of space travel. It was not only the first rocket to reach space, but also a decisive building block in the development of space technology. By building this model, you not only get an impressive collector's item, but also delve deep into the history of space travel. Ideal for enthusiasts who want to learn more about the beginnings of space travel. Caution! Not suitable for children under 12 years of age.
