### Product Description

You try to reach the different colours on your game sheet as skilfully as possible - with the help of two lines that get longer and longer as the game progresses! The dice show you what you have to draw - which can sometimes be tricky figures. The player who manoeuvres their COLOUR LINES through the colours most skilfully collects the most victory points - and they are hidden everywhere. A challenging solo mode, several variants and two different game sheets guarantee plenty of variety. Different game sheets and game variants challenge your brain - in solo play, with two or even five players!
