23817 - RC Helicopter "Interceptor" A

from **32,71 EUR**

Item no.: 398487
shipping weight: 0.50 kg
Manufacturer: Revell

Product Description

Fly safely with the Interceptor anti-collision helicopter. Thanks to the anti-collision sensor, flying accidents are significantly reduced with the Interceptor RC helicopter: if the forward-facing infrared sensor detects an obstacle - such as a wall - during forward flight, the helicopter slows down its flight and backs away from the obstacle. The 6-axis gyro ensures an extremely stable flight attitude. This 3-channel indoor helicopter takes the fascination of flying to a whole new level. The additional built-in altitude sensor makes this lively model helicopter ideal for beginners aged 8 and over. The handy 2.4 GHz remote control gives hobby pilots of all ages an unforgettable flying experience. Thanks to this interference-free technology, several model aircraft can even be controlled simultaneously if required. What the anti-collision helicopter Interceptor has to offer: 2.4 GHz remote control, replaceable LiPo battery, USB charger. Spare rotors 3 x 1.5V AA batteries are required for the remote control (not included). Age recommendation: 8
