Product Description

The children's game "We play shopping" poses questions such as: How much are the pears at Olli's fruit stand? Or is there enough money for tomatoes? Whoever shops skilfully will be the first home with a full bag. In this educational game, children practise the basics of a purchase transaction and exchange goods for money, comparing prices beforehand. In doing so, they learn to act in a planned manner and take an important step towards independence. The children familiarise themselves with the goods on the play market and explain why they would buy individual items of food. Storytelling promotes the children's language development. As soon as the shopping lists have been distributed, it's time to roll the dice and buy the cheapest goods for the list at the appropriate stall and put the money in the slot. The children attentively observe and take into account the price changes during the course of the game. Shopping pros estimate how much the goods on the shopping list will cost before they go shopping and only then start playing. With "We play shopping", the children's basic mathematical understanding is expanded. As a result, they become increasingly confident and soon have the confidence to go shopping with their parents at the weekly market in real life. Educational games that are really fun: this is the motto of Ravensburger's educational game series, which supports children in their development during the most learning-intensive years. All games are developed and tested according to the latest scientific and educational standards. The learning materials are packed into exciting stories, and a variety of materials and methods allow learning with all the senses. Details- Item number: 24985 - EAN: 4005556249855 WarningsCaution. Not suitable for children under 36 months. Small parts. Choking hazard.
